1. All bunkers and underground tunnels in Bulgarian territory on the coast have been repaired and equipped with Soviet cannons. The majority of the guns are mobile. Normally the guns are hidden inside bunkers, but in case of attack or during exercises they are run out on rails. In certain places, especially in the Varnanel (sic) district, complementary fortifications to strengthen the line were constructed in 1950 and 1951. These works were constructed by units of 8 Artillery Regiment "Primorski," by labor service units, and by civilians under the direction of Soviet officers and engineers.
2. During the summer and autumn of 1951, under the command of Soviet officer-instructors, the officers and men of 8 Artillery Regiment carried out exercises along the coast with new Soviet cannons. At the termination of the exercises, the soldiers were assigned to the coastal fortified line, where they still remain. The entire coast, to a depth of 15 kilometers from the sea, has been declared a military zone and individuals cannot enter without a special permit issued by the military authorities. That portion of the coastal line in Bulgaria is inspected frequently by high Soviet officers.
